

WEBSITE WITH SELF-SERVICE ADMIN · ANTWERP

Tattoo Tobias: a website the artist runs himself

A traditional tattoo artist with 400+ pieces of work, a full agenda and no time for web maintenance. The result: a fast one-page site in four languages, online booking that follows his real availability, and a two-way link with his Google Calendar — all managed from his phone.

400+

photos in one filterable gallery,
tagged and ordered by the artist
himself

24/7

online booking that only offers slots
he actually has free

≤ 30 s

two-way sync with Google Calendar
— in both directions

Homepage — live at tattootobias.com. Light and dark mode, EN / NL / FR / DE, hero photos chosen with a star in the admin.

The challenge

A portfolio that grew faster than the old WordPress site could follow, bookings scattered across e-mail, Instagram and text messages, and double bookings whenever the agenda and the inbox disagreed. Every change meant waiting for someone else.

The solution

One self-contained website with a built-in **Studio admin**: photos, tags, texts in four languages, reviews, opening hours and bookings — all edited by the artist, live within a second. Bookings land in his Google Calendar; his calendar blocks the site. No plug-ins, no maintenance contract.

01 Managing the portfolio

Upload from any device

Drag photos in or pick them on the phone; they are resized in the browser and stored in the cloud. No file size to worry about.

Tags become filters

Custom tags (Daggers, Objects, Classics, ...) and style groups appear as filter buttons and drop-downs on the site. The style tag doubles as the photo's subtitle.

Hero in one click

Star up to six photos and they replace the polaroids at the top of the page — in order, instantly.

Every text, four languages

All copy, tag names and Google reviews are editable per language; English by default, Dutch, French and German alongside. A change is live as soon as the field loses focus.

02 Online booking that respects the real agenda

- ✓ **Four durations:** 1-hour consultation, 2, 4 or 8 hours — each with its own description.
- ✓ **Fixed start times per weekday:** consultations only as the first slot of the day (Wed/Fri 9:00, Thu/Sat 9:00 or 10:00), 2-hour blocks at set hours, longer work at any free hour. The artist edits this grid himself.
- ✓ **Live calendar** showing only days and hours that are really free — inside opening hours, outside breaks and holidays, and not overlapping anything in Google Calendar.
- ✓ **Complete request:** idea, placement, size, black or colour, up to 8 reference photos.
- ✓ **Slot held automatically** for 7 days; unanswered requests expire and free the slot.
- ✓ **Rules he controls:** at least 2 days ahead, at most 3 months, hold time, opening hours, breaks, exceptions.
- ✓ **Notification by e-mail** for every request; confirmation to the client stays personal.

START TIMES PER DURATION

Which start times clients can pick, per duration and weekday. Leave a cell **empty** for "any free hour within the opening hours". Several times: separate with a comma, e.g. 09:00, 10:00. A fixed start time is offered on every day that is open (also when it is earlier than your usual opening hour), as long as nothing else is booked then. When you plan or move an appointment yourself, you can always use any free hour.

DURATION	MON	TUE	WED	THU	FRI	SAT	SUN
1 H CONSULTATION	CLOSED	CLOSED	09:00	09:00, 10:00	09:00	09:00, 10:00	CLOSED
2 H SMALL	CLOSED	CLOSED	10:00, 14:00	11:00, 15:00	10:00, 14:00	11:00, 15:00	CLOSED
4 H MEDIUM	CLOSED	CLOSED	ANY	ANY	ANY	ANY	CLOSED
8 H FULL DAY	CLOSED	CLOSED	ANY	ANY	ANY	ANY	CLOSED

Studio admin → Availability: start times per duration and weekday, editable by the artist.

03 Agenda, two ways

- ✓ **Confirm, move or decline** a request in one tap; "Plan & confirm" for requests without a time.
- ✓ **Site → Google in seconds:** every request appears in his calendar as 🕒, a confirmed appointment as ✓, with all client details and a link back to the admin.
- ✓ **Google → site within 30 s:** anything he puts in his calendar — a private appointment, a convention, a day off — blocks the site. Move or delete an event in Google and the booking follows.
- ✓ **Dedicated calendar** for the studio; works in Google Calendar, on iPhone and Mac.
- ✓ **Month view** in the admin with confirmed, requested and free hours; walk-ins and phone bookings added by hand.

Studio admin → Calendar: connection status, Sync now, and the month overview.

04 Built to last

Fast and static

One HTML page on a global CDN (Netlify); content and bookings in a European Supabase database with row-level security — visitors never see other clients' data.

Security: Mozilla Observatory A+

Strict Content-Security-Policy without inline scripts, HSTS, no third-party trackers, no cookie banner needed.

GDPR-ready

Privacy policy and terms & conditions in English and Dutch, generated from one small settings file (deposit, cancellation, retention periods); consent line under the booking form.

Hand-over, not lock-in

Password reset from the login screen, a user guide in plain language, full technical documentation, and a go-live runbook. Reusable for the next client.

Could your business use this?

The portfolio, booking and agenda modules are not tattoo-specific: hairdressers, photographers, coaches, restaurants, workshops — anyone who takes appointments and wants to stay in control of their own website. Fixed price, no monthly plug-in fees, delivered with documentation.
